

**2015-2016 Annual Report for Graduate Programs in Counseling
Gardner-Webb University
School of Psychology & Counseling**

Graduate faculty members met on May 9, 2016 to review evaluation data derived from the Pedagogic Improvement Records for the Mental Health Counseling Program and the School Counseling Program for the 2015-2016 academic year. Analysis of Student Learning Outcomes indicated student performance at acceptable levels on all measures of performance. Based on this analysis, no modifications to the current program curriculum were deemed necessary at this time.

	Mental Health Counseling Program	School Counseling Program
Total # of Graduates (2015-2016)	11	1**
Pass Rate on Licensure Exam (2015-2016)	80%	100%
Job Placement Rate (2015-2016)	90%	100%
Completion in Expected Timeframe (based on average for students beginning the program between 2008-2012)	76%	82%
Overall Graduation Rate (based on average for students beginning the program between 2008-2012)	80%	93%
<i>These numbers reflect students enrolled in programs housed on the Boiling Springs campus only. The Charlotte campus program has not been in place long enough for any students to have completed the program.</i>		

** This number does not reflect the typical number of students graduating from the School Counseling Program each year. This is the result of two factors—a relatively small cohort and a larger than usual number of students who left the program or deviated from the developmental sequence. Out of a beginning cohort of seven students, one changed career paths, two moved to another state, and three deviated from the course sequence for personal reasons which resulted in a delay in their graduation.

Based on those students who reported on their post-graduation employment, Gardner-Webb graduates are taking positions in private practices, agencies, therapeutic residential programs, schools, departments of corrections, positions with individuals and families on issues of grief and loss, and in positions serving individuals recovering from substance abuse.
